Documentación cluster con Proxmox 3 nodos

Realizaré la práctica desde Hyper-V.

Crearé tres máquinas virtuales con Proxmox.

Lo primero que haré será habilitar la virtualización anidada para poder instalar los sistemas Proxmox.

Abro el Windows PowerShell ISE ejecutandolo como administrador

Habilito la virtualización anidada para mis tres máquinas virtuales Proxmox mediante estos comandos, "Proxmox1, Proxmox2 y Proxmox3" son los nombres de las máquinas virtuales

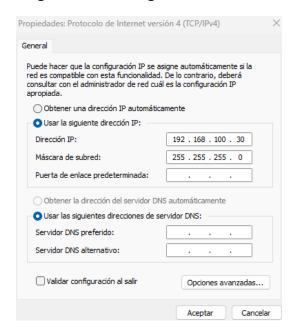

```
PS C:\Windows\system32> Set-VMProcessor -VMName "Proxmox1" -ExposeVirtualizationExtensions $true
PS C:\Windows\system32> Set-VMProcessor -VMName "Proxmox2" -ExposeVirtualizationExtensions $true
PS C:\Windows\system32> Set-VMProcessor -VMName "Proxmox3" -ExposeVirtualizationExtensions $true
```

Una vez habilitada, iré a Hyper-V y añadiré un adaptador interno llamado "lan interna" en cada máquina, que estará debajo de "Default Switch"

Cuando ya los he añadido, configuro el adaptador "lan interna" desde mi máquina real

Asignaré esta configuración

Procederé con la instalación de Proxmox en las tres máquinas virtuales Lo estaré realizando instalando en las tres máquinas a la vez.

Selecciono "Install Proxmox VE (Graphical)"

Proxmox VE 8.2 (iso release 2) - https://www.proxmox.com/

Welcome to Proxmox Virtual Environment

Install Proxmox VE (Graphical)
Install Proxmox VE (Terminal UI)

Proxmox Virtual Environment (PVE)

The Proxmox Installer automatically partitions your hard disk. It installs all required packages and makes the system bootable from the hard disk. All existing partitions and data will be lost.

Press the Next button to continue the installation

- Please verify the installation target
 The displayed hard disk will be used for the installation.
 Warning: All existing partitions and data will
- be lost.

 Automatic hardware detection
- The installer automatically configures your hardware.
- Graphical user interface
 Final configuration will be done on the graphical user interface, via a web browser.

Target Harddisk	/dev/sda (40.00GiB, Virtual Disk) ▼	Options			
Abort			Previous	Next	

Asigno localización y zona horaria

Location and Time Zone selection

The Proxmox Installer automatically makes location-based optimizations, like choosing the nearest mirror to download files from. Also make sure to select the correct time zone and keyboard layout.

Press the Next button to continue the installation

- Country: The selected country is used to choose nearby mirror servers. This will speed up downloads and make updates more reliable.
- Time Zone: Automatically adjust daylight saving time.
- Keyboard Layout: Choose your keyboard layout

Asigno contraseña y email

Configuro la red de esta forma, le asigno el nombre y dejo por defecto la IP que nos da el "Default switch", adjunto foto de las configuraciones de red de las tres máquinas virtuales

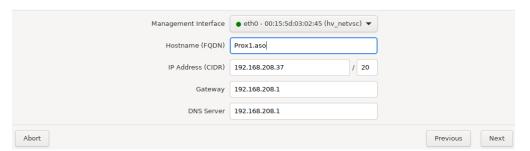

Management Network Configuration

Please verify the displayed network configuration. You will need a valid network configuration to access the management interface after installing.

After you have finished, press the Next button. You will be shown a list of the options that you chose during the previous steps.

- IP address (CIDR): Set the main IP address and netmask for your server in CIDR notation.
- Gateway: IP address of your gateway or firewall.
- DNS Server: IP address of your DNS server.

Management Network Configuration

Please verify the displayed network configuration. You will need a valid network configuration to access the management interface after installing.

After you have finished, press the Next button. You will be shown a list of the options that you chose during the previous steps.

- IP address (CIDR): Set the main IP address and netmask for your server in CIDR notation.
- Gateway: IP address of your gateway or firewall.
- DNS Server: IP address of your DNS server.

- Gateway: IP address of your gateway or firewall.
- DNS Server: IP address of your DNS server.

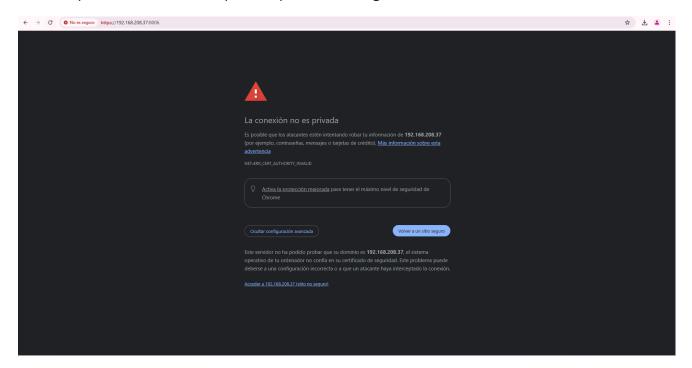

Aparecerá un resumen de toda la configuración realizada, confirmo que este todo correcto y empezará la instalación.

Una vez que esté instalado Proxmox en cada máquina virtual, podré ver al abrirlo su IP y puerto.

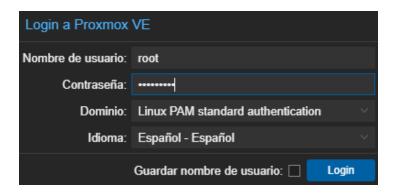

Welcome to the Proxmox Virtual Environment. Please use your web browser to configure this server - connect to:
https://192.168.208.37:8006/
Prox1 login: _

Desde el navegador de mi equipo real pongo su IP y puerto, y hago lo mismo con las otras dos máquinas.

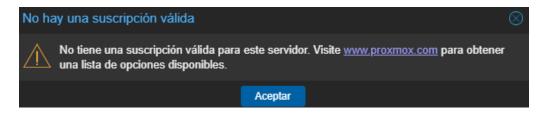

Me dirá que la conexión no es privada pero accedo igualmente

Accedo con el root

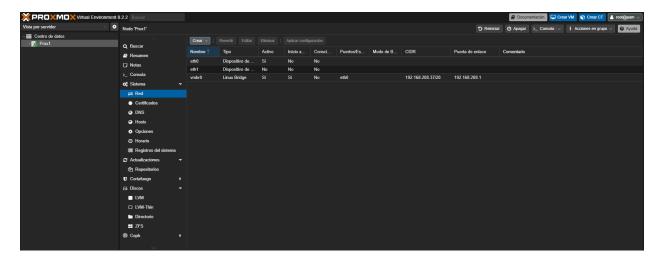

Me avisará de que no tengo una suscripción válida

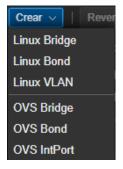

Y como he comentado este proceso lo realizo con las otras dos máquinas virtuales en dos pestañas nuevas en el navegador

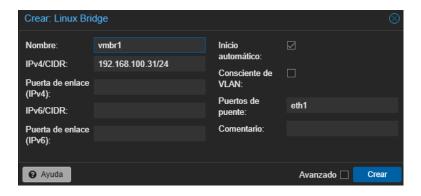

Desde "Proxmox1" > "Red"

Creo un nuevo adaptador "Linux Bridge"

Lo meto en la misma red que mi "lan interna"

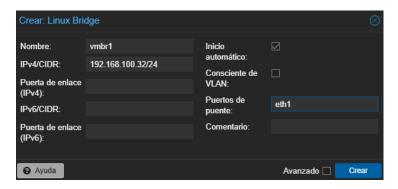

Aplico la configuración

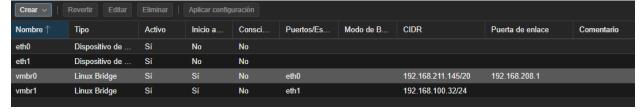

Una vez aplicada la configuración, puedo acceder desde la IP de la red interna que le he configurado junto con el puerto, y puedo cerrar la pestaña que tenía previamente que estaba desde "default switch".

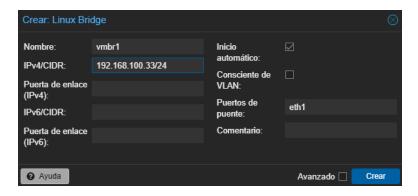

Realizo el mismo proceso con las otras dos máquinas

Proxmox2

Proxmox3

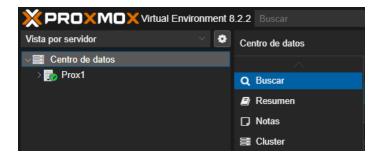

Como he comentado me conecto mediante la ip que les he asignado a cada una de la "lan interna" y el puerto

Comenzaré con el cluster para los 3 nodos.

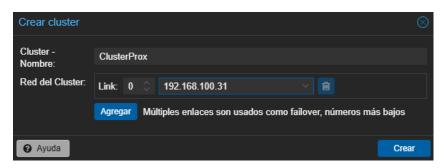

Desde "Centro de datos" de mi conexión con Proxmox1, selecciono "Cluster"

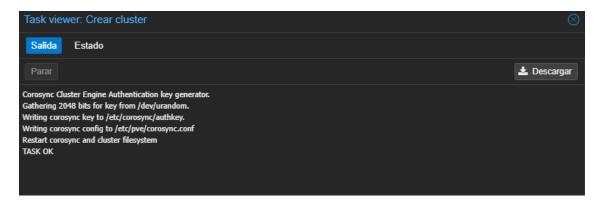

Clico en "Crear cluster"

Asigno nombre y red del cluster (la red será la lan interna)

Confirmo que se haya creado correctamente

Selecciono "Información de la union"

Copio la información de la unión para poder conectarme al cluster con los otros dos nodos

Ahora desde Proxmox2

Selecciono "unirse al Cluster"

Pego la información que he copiado anteriormente de la información de la unión, y pongo la contraseña root del par

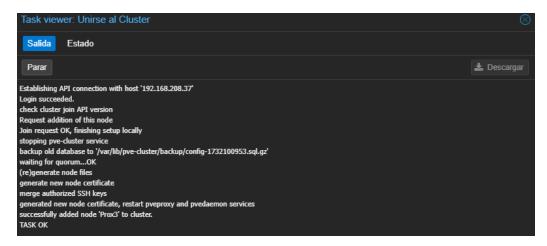

Confirmo que me haya unido, al actualizar la conexión de Proxmox1, ya me aparecerá el que se ha unido al Cluster

Realizo el mismo proceso con el tercero (Proxmox3)

Compruebo que aparezca correctamente

Puedo cerrar las otras dos ventanas del navegador que tenían la conexión con Proxmox2 y Proxmox3, ya que desde Proxmox1 ya puedo visualizar los otros dos nodos
